PROFESSIONAL SUMMARY

Software Engineering student (B.Sc. CS, expected 2027) specializing in backend and full-stack development with Java, Spring Boot, REST APIs, and MySQL. Builds full-stack, AI-integrated applications end-to-end — from API design and database architecture to containerized cloud deployment. Comfortable working across the stack, integrating third-party AI APIs, and debugging complex systems independently.

Strong problem-solving and debugging abilities, with hands-on experience collaborating in hackathon teams and communicating technical ideas clearly.

TECHNICAL SKILLS

Languages: Java, Python, SQL, HTML5, CSS3

Frameworks & Libraries: Spring Boot, Spring Security, Spring Data JPA (Hibernate), REST APIs

Databases: MySQL, Aiven Cloud SQL

Tools & Platforms: Git, GitHub, Docker, Maven, Render, Cloud Deployment

Concepts: Object-Oriented Programming (OOP), Full-Stack Development, Microservices, API Integration, JSON-based Communication, AI/ML Integration

EDUCATION

Bachelor of Science in Computer Science (B.Sc. CS)

Thakur Ramnarayan College of Arts and Commerce, Mumbai • Expected Graduation: June 2027

PROJECTS

Nexus.AI — Smart Library Management System

Live Demo: nexus-ai-lms.onrender.com

- Built a full-stack library management system with role-based access control using Spring Security, separating admin and student permissions for inventory and borrowing.
- Designed a real-time dashboard tracking total books, active borrows, overdue items, and new member registrations.
- Developed a responsive, mobile-optimized interface for catalog browsing and book borrowing.
- Integrated the Google Gemini API for AI-driven catalog insights, and containerized the application with Docker for cloud deployment on Render with an Aiven-hosted MySQL database.

EduPredict — AI-Powered Student Academic Performance Dashboard

Live Demo: edupredict-ai-swd1.onrender.com

- Built a full-stack academic analytics platform using Spring Boot and a Python-based ML integration to flag at-risk students from performance data.
- Designed REST APIs with JSON-based communication between the backend and the ML service to serve real-time predictions to the dashboard.
- Containerized the application with Docker and deployed it to the cloud for a reproducible, portable environment.

AI Code Mentor — Intelligent AI-Driven Code Analysis Platform

Live Demo: ai-code-mentor.netlify.app

- Developed an AI-powered developer assistant using Spring Boot microservices integrated with the Google Gemini API for contextual code analysis.
- Implemented interactive debugging support, code explanations, and optimization suggestions for submitted code.
- Built automated Big-O time and space complexity analysis to help developers evaluate algorithm scalability.

CERTIFICATIONS

- Claude 101 — Anthropic
- Claude Code in Action — Anthropic
- Git Training Completion — EduPyramids, SINE, IIT Bombay
